

PART NUMBER: ACHRYH-6200

- Mount speaker in a location that will protect speaker from direct heavy contact with rain/snow/dirt. If the speaker gets wet, it will NOT damage it, but you don't want the speaker to get submerged with water. Mount the speaker on a downward angle with the outlet of cone downward. This allows water to drain from speaker cone and prevent water damage.
- Wire the harness BEFORE plugging harness (Male-Female) together. The **RED** lead should go to an ignition source. Ignition source is a 12v source that has current only when the vehicle key is in the "ON" Position. This is not necessary, but recommended.
- **BLACK** lead should be wired to a good ground (negative).
- The 2(two) **GREEN** leads should be wired to the green leads on the speaker. Both leads are green and it does NOT matter which green you splice to.
- The **WHITE** wires coming from control box are for light features (not included). Wire according to light instructions. Use the vacant cavities on harness. Use wiring schematic below.

Installing and Operating the Control Box

- To mount the control box use the included hanger. Mount inside cab of vehicle in a location that is easy to control while operating vehicle. NOTE: Mount control box where it will not get wet.
- Mount the included microphone holder in easy access to vehicle operator. NOTE: Mount Microphone Holder where it will not get wet.

- **A:** Momentary Horn/Wail Switch. Push the switch upward for Air Horn Sound. Push the switch downward for siren wail sound.
- **B:** Emergency Light Function switches.
- **C:** PA & Siren tone selection dial. Auxiliary selection is using the PA function. The remaining 6 functions are siren tones.
- **D:** ON/OFF Dial and Volume Control.
- **E:** Microphone to use for PA function.
